## Introduction

---

Millar Merrigan have commissioned Ironbark Environmental Arboriculture (IEA) to provide an updated arboricultural impact assessment in response to the Department of Energy, Environment and Climate Action (DEECA) request for further information (PA2302062 15/02/24). Two-hundred and sixty (260) trees were assessed at Belgrave Heights Christian School at 20 Wattle Valley Rd, Belgrave:

This report references the following documents:

- *Arboricultural Impact Assessment* (Ironbark Environmental Arboriculture, 10<sup>th</sup> November 2022)
- *Arboricultural Impact Assessment* (Ironbark Environmental Arboriculture, 21<sup>st</sup> September 2023)
- *Landscape Concept Plan*, Drawing No LC001 (RDLA Landscape Architect 18/06/24)

An initial site visit was conducted on the 24<sup>th</sup> March 2022, where IEA assessed two hundred and forty six (246) trees within the subject site. An additional fourteen (14) trees located on neighbouring properties were surveyed on the 4<sup>th</sup> August 2023 by Pat Dyson of IEA; tree data and photographs from this report are included in the appendix.

IEA have not re-assessed the trees since the initial site visits and this arboricultural impact assessment is based on the aforementioned documents.

The findings of this report were as follows:

- Forty-eight (48) trees have *high* retention values.
- Sixty-three (63) trees have *medium* retention values.
- One-hundred and forty-nine (149) trees have *low* retention values.
- Seven (7) trees have *major* encroachments from the proposed design.
- Five (5) trees have *minor* encroachments from the proposed design.

**ADVERTISED  
PLAN**

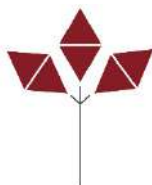

## Planning Context

---

The site is within Yarra Ranges Shire and is zoned as *Low Density Residential Zone* (LDRZ); and is covered by the *Significant Landscape Overlay – Schedule 22* (SLO22).

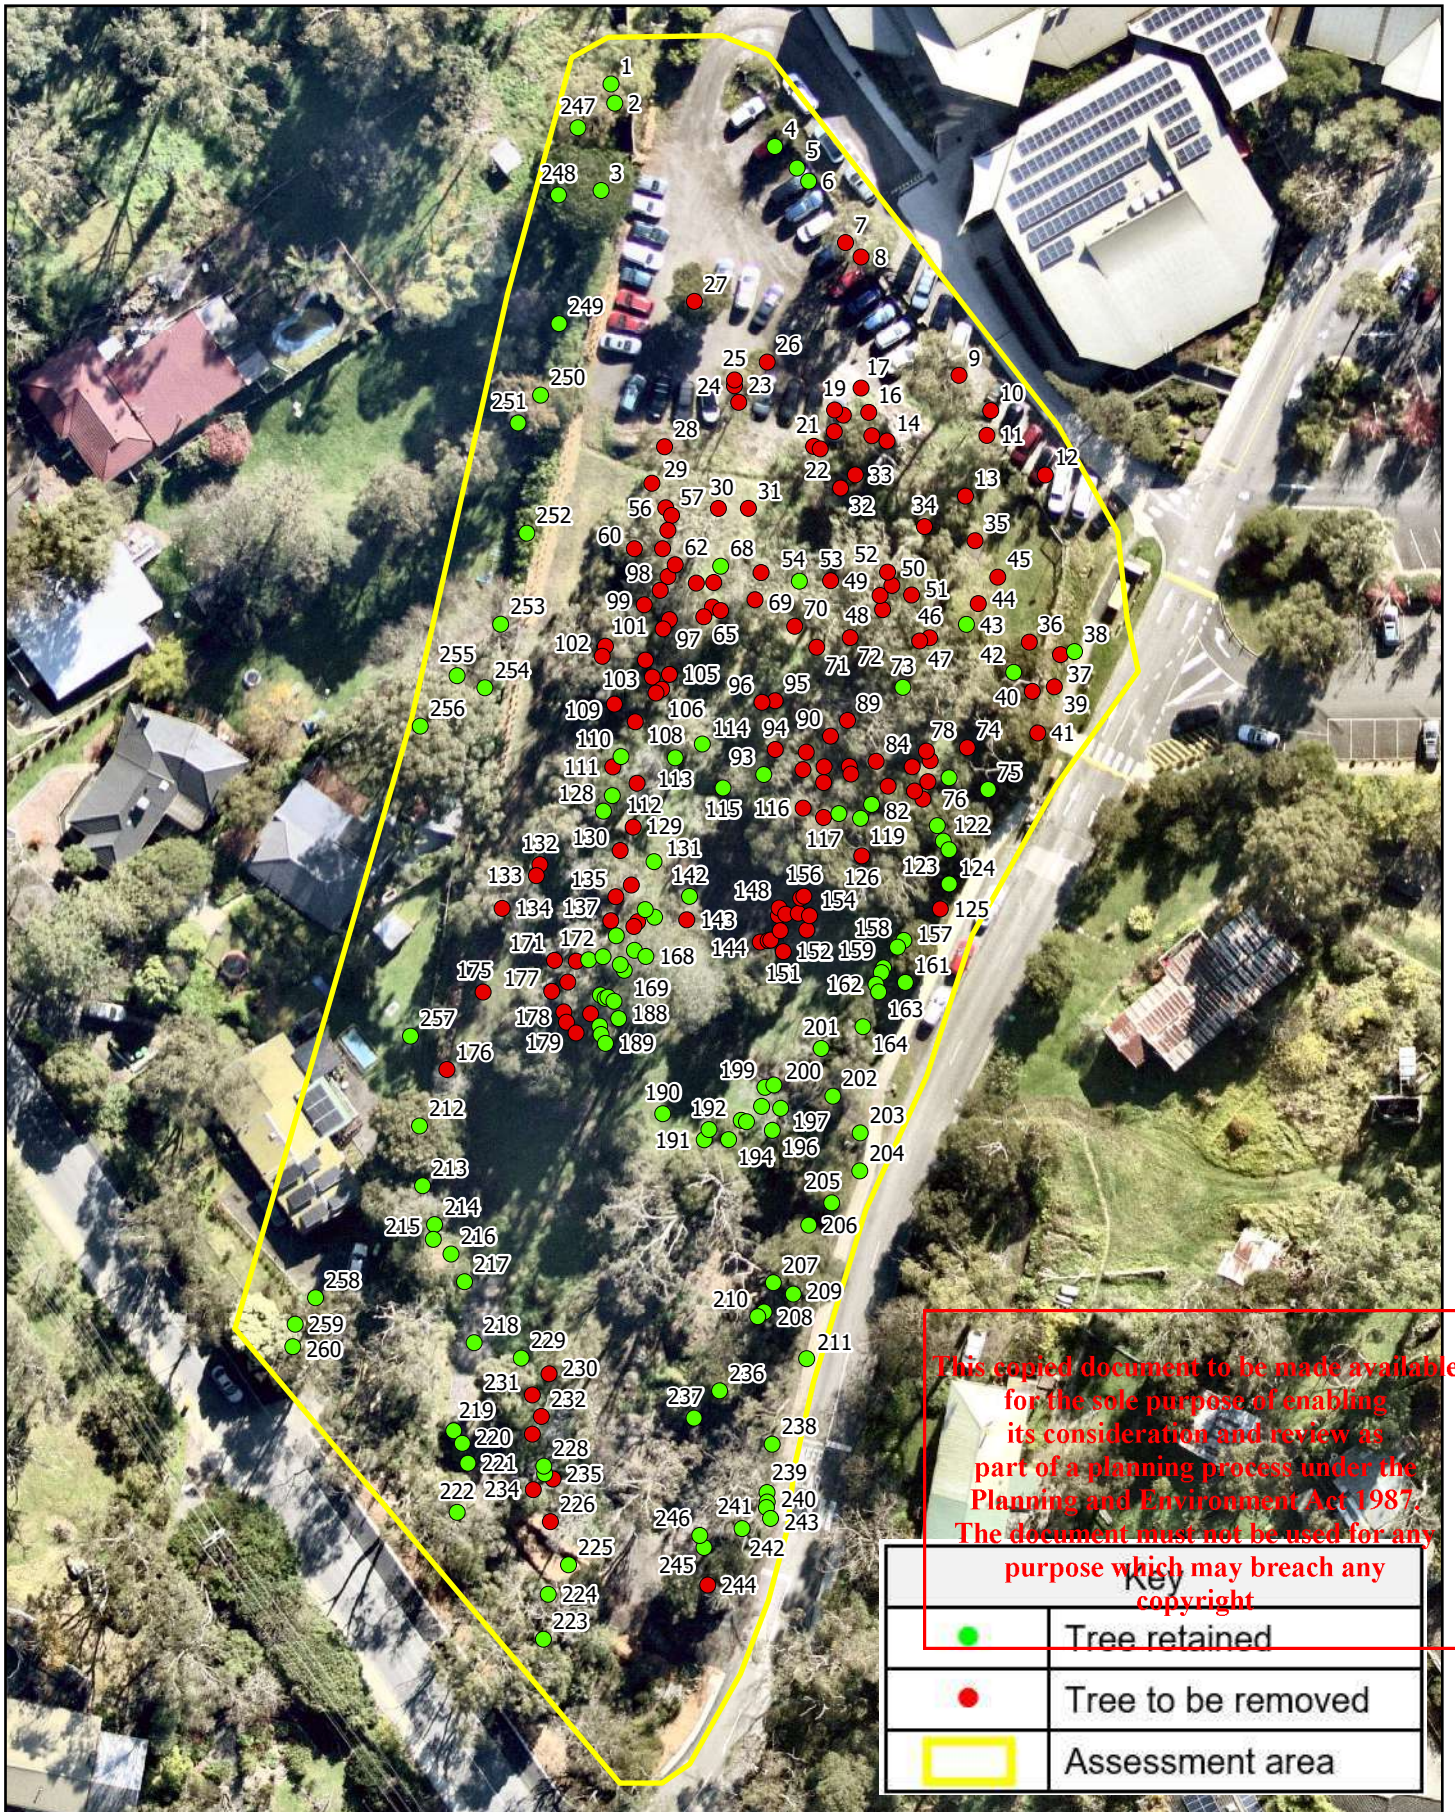

The site is greater than 4000m<sup>2</sup>, therefore vegetation removal is subject to assessment against Clause 52.17 *Native Vegetation*.

The *Department of Energy, Environment and Climate Action* (DEECA formerly DELWP) shows patches of *Herb Rich Foothill Forest* (EVC 23) present on site with *Eucalyptus radiata*, *obliqua* and *cypellocarpa* as being characteristic of the site.

## Arboricultural Impact Assessment

---

### Proposed school building

---

Thirty (30) trees are within the footprint of the proposed new school building located at the northern border of the assessment area. Subsequently, these trees are proposed for removal:

- Trees #7-26, 30-35, 45 and 50-52.

The proposed building and adjacent landscaping design encroaches on three (3) trees that are currently proposed for retention:

| Tree ID # | Proposed Impacts   | AS 4970-2009 Encroachment Type | Arboricultural Impact Assessment   |
|-----------|--|--------------------------------|--|
| #38       | SRZ encroachment from the proposed concrete connecting pathway                       | Major                          | <i>Trees with an SRZ encroachment are unlikely to remain viable post-construction.</i>   |
| #42       | TPZ encroachment of 9% from the proposed access ramp and concrete connecting pathway | Minor                          | <i>Trees with a minor TPZ encroachment will remain viable post-construction if isolated from construction impacts with tree protection fencing and/or ground protection.</i> |
| #43       | TPZ encroachment of 24% from concrete paving of the main plaza                       | Major                          | <i>Trees with a major TPZ encroachment are unlikely to remain viable post-construction.</i>  |

### Proposed Road and Car Park

---

A new road with two (2) car parks is proposed to be constructed along the western border of the site. Consequently, twenty-three (23) trees are located within the design footprint and are posed for removal:

- Trees #27-29, 60, 101, 102, 132, 133, 171, 173-175, 177-180, 226, 231-235 and 244.

The current design of the road and carparks show encroachments on nine (9) trees:

| Tree ID # | Proposed Impacts                                    | AS 4970-2009 Encroachment Type | Arboricultural Impact Assessment   |
|-----------|---|--------------------------------|--|
| #3        | TPZ encroachment of 28.5% from the proposed carpark | Major                          | <i>Trees with a major TPZ encroachment are unlikely to remain viable post-construction.</i>  |
| #110      | TPZ encroachment of 2.5% from the proposed carpark  | Minor                          | <i>Trees with a minor TPZ encroachment will remain viable post-construction if isolated from construction impacts with tree protection fencing and/or ground protection.</i> |
| #182      | SRZ encroachment from the proposed road             | Major                          | <i>Trees with a SRZ encroachment are unlikely to remain viable post-construction</i>   |
| #183      | SRZ encroachment from the proposed road             | Major                          | <i>Trees with a SRZ encroachment are unlikely to remain viable post-construction</i>   |
| #189      | SRZ encroachment from the proposed road             | Major                          | <i>Trees with a SRZ encroachment are unlikely to remain viable post-construction</i>   |
| #227      | TPZ encroachment of 6% from proposed carpark        | Minor                          | <i>Trees with a minor TPZ encroachment will remain viable post-construction if isolated from construction impacts with tree protection fencing and/or ground protection.</i> |
| #228      | SRZ encroachment from proposed carpark              | Major                          | <i>Trees with a SRZ encroachment are unlikely to remain viable post-construction</i>   |
| #229      | TPZ encroachment of 9.5% from the proposed car park | Minor                          | <i>Trees with a minor TPZ encroachment will remain viable post-construction if isolated from construction impacts with tree protection fencing and/or ground protection.</i> |
| #237      | TPZ encroachment of 4% from the proposed road       | Minor                          | <i>Trees with a minor TPZ encroachment will remain viable post-construction if isolated from construction impacts with tree protection fencing and/or ground protection.</i> |

## Defendable Space

---

Eighty-six (86) trees are within the defendable space and are proposed for removal.

- Trees #36-44, 46-49, 53, 55-59, 61-67, 69-72, 74, 77-92, 94-96, 97-100, 103-109, 11, 112, 116, 117, 125, 126, 129, 130, 134-139, 143-156, 176, 181 and 230

## No Encroachments

---

Under the current design, one hundred and five (105) trees are proposed for retention and show no encroachments.

- Trees #1, 2, 4-6, 54, 68, 73, 75, 76, 93, 113-115, 118-124, 128, 131, 140, 141, 142, 157-165, 167-170, 172, 190-225, 236-243, 245 and 246-260.

If isolated from construction works with adequate protection such as TPZ signage and tree protection fencing, these trees should persist post-construction

## Summary

---

| Tree ID                    | Tree Count | Encroachment Type             |
|----------------------------|------------|-------------------------------|
| #42, 110, 227, 229 and 237 | 5          | Minor                         |
| #3 and 43                  | 2          | Major TPZ Encroachment (>10%) |
| #38, 182, 183, 189 and 228 | 5          | SRZ Encroachment              |

The current design of the proposed developments results in major encroachments to seven (7) trees (#3, 38, 43, 182, 183, 189 and 228) that are currently proposed for retention.

A major encroachment is an encroachment greater than 10% into the TPZ, or an encroachment into the SRZ. These trees are not expected to remain viable post-construction.

The current design of the proposed developments results in minor encroachments to five (5) trees (#42, 110, 227, 229 and 237) currently proposed for retention.

A minor encroachment is an encroachment of less than 10% into the TPZ. With adequate tree protection such as fencing and TPZ signage, these trees are likely to remain viable post-construction.

## Tree Assessment Descriptors

| Origin     |  |
|------------|--|
| Indigenous | The species is characteristic of the current extent or pre-1750 ecological vegetation class (EVC) mapping for the assessment area.<br>The species is native to Victoria and occurs naturally in this location. |
| Native     | The species is native to the state of Victoria.  |
| Australian | The species is native to Australia but does not occur naturally within Victoria.   |
| Exotic     | The species does not naturally occur within Australia.   |

| Health |  |
|--------|--|
| Good   | The tree displays 71-100% live canopy mass and has near-optimal foliage characteristics in size, colour and density.<br><br>The tree may have deadwood in the interior canopy.<br><br>The tree may exhibit a low level of pest/pathogen infestation.<br><br>It is expected that the tree will maintain its condition of health without intervention. |
| Fair   | The tree displays 51-70% live canopy mass, and the foliage may be stunted or partly discoloured.<br><br>The tree may display some dieback of the peripheral canopy.<br><br>The tree may exhibit a medium-level pest/pathogen infestation.<br><br>With intervention, it is expected that the tree will improve its condition of health                |
| Poor   | The tree displays < 50% live canopy mass and the foliage is completely discoloured, dying or both.<br><br>The tree has extensive dieback of the peripheral canopy.<br><br>The tree has extensive pest/pathogen infestation.<br><br>The tree is unlikely to improve its condition of health even with intervention.                                   |
| Dead   | The tree has no live vascular tissue.  |

## Glossary of Arboricultural Terms

---

|                            |  |
|----------------------------|--|
| Tree protection zone (TPZ) | <p>In accordance with <i>AS 4970-2009 Protection of Trees on Development Sites</i>, the trunk diameter measured at 1.4 m above ground level is used to calculate the tree protection zone (TPZ).</p> <p>The TPZ is a specified area above and below ground and at a given distance from the trunk set aside for the protection of a tree's root and crown.</p> |
| Structural root zone (SRZ) | <p>In accordance with <i>AS 4970-2009 Protection of Trees on Development Sites</i>, the SRZ is calculated from the diameter of the trunk above the root buttress.</p> <p>The SRZ is the area required for tree stability. This is the area where structural woody roots are likely to occur.</p>   |
| Major encroachment         | The proposed encroachment is more than 10% of the TPZ area, inside SRZ or both.  |
| Minor encroachment         | The proposed encroachment is less than 10% of the TPZ area and outside the SRZ.  |
| Epicormic shoot            | Regrowth shoots which are produced from latent buds and are commonly less strongly attached than original branches.  |
| Bark inclusion             | Inwardly turned bark within the union of branches or codominant (twin) trunks. In some circumstances, included bark can reduce the structural integrity of a branch or trunk union.  |

## Expertise to Provide Consultancy Services

---

I have over twenty (20) years of experience in arboricultural and ecological industries, including over sixteen (16) years of consultancy.

I have training and experience in the collection of biological samples and data for scientific research. I have co-authored papers published in peer-reviewed scientific journals.

My qualifications, experience and expertise are in the fields of arboriculture, planning and wildlife biology, which ensures that I am qualified to make informed independent assessments of issues pertaining to the management of vegetation and associated fauna.

Yours Sincerely

Director and Principal Consultant
