## ADVERTISED PLAN

### Acknowledgment of Country

Urbis acknowledges the Traditional Custodians of the lands we operate on. We recognise that First Nations sovereignty was never ceded and respect First Nations peoples continuing connection to these lands, waterways and ecosystems for over 60,000 years. We pay our respects to First Nations Elders, past and present.

Urbis is committed to incorporating our respect for First Nations cultures, peoples and storytelling in our work across the Country. We are proud to have partnered with Darug Nation artist, **Hayley Pigram**, and to profile her artwork – **Sacred River Dreaming**.

*The river is the symbol of the Dreaming and the journey of life. The circles and lines represent people meeting and connections across time and space. When we are working in different places, we can still be connected and work towards the same goal.*

All information supplied to Urbis in order to conduct this research has been treated in the strictest confidence. It shall only be used in this context and shall not be made available to third parties without client authorisation. Confidential information has been stored securely and data provided by respondents, as well as their identity, has been treated in the strictest confidence and all assurance given to respondents have been and shall be fulfilled.

## Executive Summary

The below is a summary of the waste management strategy proposed for the subject site. The complete report must be read in detail prior to implementing the waste management plan.

**1. Residential**, inclusive of:

- 25 Two bed apartments
- 15 Three bed apartments
- Various Communal Spaces

**2. Commercial** throughout the precinct, including:

- 115.5sqm of Cafe
- 82.5sqm of Retail (Food & Drink)

**This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright**

*For operational efficiencies, independent waste systems have been allocated to the Residential and Retail components of the development.*

*The following waste systems and collection arrangements are proposed for the development:*

**Table 1 – Overall Site – Waste Collection Summary**

| Use         | Stream                                 | Item                            | Collections per Week | Collection                            |
|-------------|----------------------------------------|---------------------------------|----------------------|---------------------------------------|
| Residential | Garbage                                | 2x 660 Litre Bins               | 3                    | All Collections by Private Contractor |
|             | Commingled Recycling                   | 2x 660 Litre Bins               | 3                    |                                       |
|             | Organics                               | 3x 240 Litre Bins               | 2                    |                                       |
|             | Glass                                  | 3x 240 Litre Bins               | 2                    |                                       |
|             | Hard Waste & E-waste                   | 2m <sup>2</sup> Hard Waste Area | As Required          |                                       |
| Commercial  | Garbage                                | 4x 1100 Litre Bins              | 2                    |                                       |
|             | Commingled Recycling                   | 2x 660 Litre Bins               | 2                    |                                       |
|             | Organics                               | 3x 240 Litre Bins               | 2                    |                                       |
|             | Glass                                  | 2x 240 Litre Bins               | 1                    |                                       |
|             | Hard Waste & Additional Waste Streams* | 2m <sup>2</sup> Hard Waste Area | As Required*         |                                       |

*\* Additional waste streams (i.e. e-waste or soft plastic) will be collected on an as required basis due to the requirement to accumulate a sufficient volume of material prior to collection. Anticipated collection of approx. 1 per month per stream.*

No bins will be stored outside of the title boundary or presented to kerb for collection at any time.

Building Management will ensure sufficient access is provided for collection vehicle operators during collection times.

Where possible, collections between commercial and residential uses of similar streams should be collected concurrently. This would reduce collection costs and number of trucks visiting the site when operational.

## Residential waste collection

Residential waste collections will occur directly from the rear laneway adjacent to the *residential waste room at ground floor* via **private contractor**. A **6.4m Low Height Clearance (2.1m)** or smaller collection vehicle will be utilised to perform all collections, entering and exiting the *allocated loading area in the rear laneway*, accessed via *Horne Street*. A minimum height clearance of **2.5m at the point of collection and 2.1m throughout vehicle path of travel** has been allowed for within the loading area and associated access. Swept path analysis showing sufficient access is provided in **Appendix B**.

Collection vehicles will prop within the *loading area*, with operators to collect the material directly from the waste room and return empty storage containers (if appropriate) immediately upon emptying.

## Commercial waste collection

Commercial waste collections will occur directly from the rear laneway adjacent to the *commercial waste room at ground floor* via **private contractor**. A **6.4m Low Height Clearance (2.1m)** or smaller collection vehicle will be utilised to perform all collections, entering and exiting the *allocated loading area in the rear laneway*, accessed via *Horne Street*. A minimum height clearance of **2.5m at the point of collection and 2.1m throughout vehicle path of travel** has been allowed for within the loading area and associated access. Swept path analysis showing sufficient access is provided in **Appendix B**.

Collection vehicles will prop within the *loading area*, with operators to collect the material directly from the waste room and return empty storage containers (if appropriate) immediately upon emptying.

**ADVERTISED  
PLAN**

# Introduction

The following Waste Management Plan (WMP) has been prepared for the proposed mixed-use development at **7-15 Horne Street, Elsternwick**.

This WMP has been prepared based on **City of Glen Eira's Waste Management Building design for a sustainable future** and **Sustainability Victoria Better Practice Guide for Waste Management and Recycling in Multi-unit Developments (2019)** and best practice waste management methodology and technologies commonly available in Australia.

The waste services proposed throughout this WMP will be reviewed with respect to any change in the operational requirements of the subject development over time. Revised waste management plans will be issued to Council for approval prior to adoption.

## Land Use and Development Summary

Table 2 – Development Details Summary

|                       |                                            |
|-----------------------|--------------------------------------------|
| <b>Client:</b>        | Auyin Property Development Pty Ltd         |
| <b>Land Use Type:</b> | Mixed Use: Commercial & Residential        |
| <b>Number Levels:</b> | 13 levels and 2 additional basement levels |

Table 3 – Development summary

| Development Component | Use                   | Quantity / Area      |
|-----------------------|-----------------------|----------------------|
| <b>Residential</b>    | Residential (2 Bed)   | 25 Units             |
|                       | Residential (3 Bed)   | 15 Units             |
| <b>Commercial</b>     | Café / Restaurant     | 115.5 m <sup>2</sup> |
|                       | Retail (Food & Drink) | 82.5 m <sup>2</sup>  |

# Waste Management Analysis

---

### RESIDENTIAL

The following waste management strategy addresses the residential components of the subject development.

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

# 1 Residential Waste Management

This section covers the waste management strategy for the **residential** component only including waste stream separation, waste calculations and material handling.

For operational efficiencies, independent waste systems have been allocated to the **Commercial** (inclusive of Retail (Food & Drink) and Restaurant) waste strategy and detailed in **Section 2**.

This Waste Management Plan makes allowance for extended waste streams and methodologies to enhance the ability to divert waste from landfill.

## 1.1 Residential Waste Stream Systems

Waste shall be sorted on-site by tenants as appropriate into the following streams.

**Extended Waste streams are not mandatory to be separated and subject to building management preference.**

**Table 4 – Residential Waste Streams**

| Core Waste Streams       | Extended Waste Streams        |
|--------------------------|-------------------------------|
| General Waste (Garbage)  | Cardboard and Waxed Cardboard |
| Commingled Recycling     | Soft Plastics                 |
| Food Organics            | Unique Waste Streams (e.g.    |
| Glass                    |                               |
| Hard Waste / Bulky Waste |                               |
| Electronic Waste         |                               |

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

### 1.1.1 Core Waste Streams

#### 1.1.1.1 General Waste and Commingled Recycling

Each apartment shall have provisions for plastic lined bins to have a minimum cumulative capacity of 30 litres each for the temporary holding of garbage and commingled recycling. Residents will transfer bagged garbage and loose recyclables as required into the appropriate waste chute provided on each floor Residential Waste Chute Rooms (Per Level).

#### 1.1.1.2 Food Organics

Each apartment shall have provision for kitchen organics caddys (refer to **Figure 2**) to have a minimum capacity of 7 litres for the temporary holding of food organics waste. Residents will transfer these caddys to the Ground Level Waste Room and dispose the material within the 240L bins.

#### 1.1.1.3 Glass Waste

Provisions for separate 240 litre glass drop-off bins have been made within the residential waste room at Ground floor.

Each apartment shall have provision for 15 litres bins for the temporary holding of glass waste. Residents will transfer the glass waste to the 240 litre bins within the Ground Floor as required.

#### 1.1.1.4 Hard Waste and Electronic Waste

A dedicated 2sqm residential hard waste and e-waste on ground floor will be used by residents to temporarily store their hard waste and E-Waste until the time of collection. Residents will use the goods lift to

# ADVERTISED PLAN

transfer their hard waste/e-waste between floors to the waste room at GF. Hard waste/ e-waste will be collected on an as required basis.

Hard Waste collection will be coordinated with building management.

## 1.1.2 Extended Waste Streams

### 1.1.2.1 Container Deposit Scheme (VIC)

If deemed appropriate by building management, a dedicated 240L bins on ground floor waste room can be used by residents to dispose of any eligible aluminium, glass, plastic and carton drink containers between 150mL and 3 litres that are unwanted.

The Container Deposit Scheme (CDS) is a scheme supported by Recycling Victoria to reduce litter. Additionally to the provision of bins within the development, the Victorian Government states *"There are many convenient and accessible locations across Victoria for participants to return empty drink containers. Community access and service standards ensure that participants can return their drink containers to a refund point that is convenient for them, regardless of where they are in Victoria."*

*There are a variety of ways to return drink containers, including:*

- reverse vending machines
- depots
- over-the-counter collection points
- Mobile or 'pop-up' refund collection points"

Further details of CDS can be found in their official website <https://cdsvic.org.au/locations>.

**This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright**

### 1.1.2.2 Charity

If deemed appropriate by building management, a dedicated 240L bin on ground floor waste room can be used by residents to temporarily hold of any good quality household items that can be repurposed, reused or donated, until the time of collection.

### 1.1.2.3 Additional Waste Streams

The following list of waste streams have not been individually included within the equipment provision but rather are a suggestion of streams that are typically found in residential waste generation and its separation will increase the diversion from landfill. Generally stored within smaller bins appropriate to the stream within a dedicated area as nominated adjacent to the loading dock. This may include fluorescent tubes, X-rays, eye glasses, soft plastics and printer cartridges.

Figure 2 – Example Soft Plastic Gathering Gathering Stand (left) and unique recyclables station (right)

## 1.2 Residential Waste Generation

Waste generation rates per week are shown in **Table 5** and are based on a 7 day per week operation for residential uses.

**Table 5 – Residential Waste Generations**

| Use                 | Weekly Generation Rate (Litres / Apartment / Week) |           |          |       |
|---------------------|----------------------------------------------------|-----------|----------|-------|
|                     | General Waste                                      | Recycling | Organics | Glass |
| Residential – 2 Bed | 75                                                 | 70        | 25       | 30    |
| Residential – 3 Bed | 90                                                 | 84        | 30       | 36    |

Weekly waste generation assessment for the residential development component is shown in Table 6.

Common areas of the residential facilities (i.e. communal spaces, lounge area, terraces, etc.) are not considered to generate additional waste. Waste generated by these ancillary areas is created in service of the apartments and is therefore incorporated into the rates shown above.

**Table 6 – Residential Waste Generation Assessment**

| Use                 | Quantity | Weekly Waste Volume (Litres / Week) |              |              |              |
|---------------------|----------|-------------------------------------|--------------|--------------|--------------|
|                     |          | General Waste                       | Recycling    | Organics     | Glass        |
| Residential – 2 Bed | 25       | 1,875                               | 1,750        | 625          | 750          |
| Residential – 3 Bed | 15       | 1,350                               | 1,260        | 450          | 540          |
| <b>TOTAL</b>        |          | <b>3,225</b>                        | <b>3,010</b> | <b>1,075</b> | <b>1,290</b> |

## 1.3 Internal Waste Transfer and Handling

All waste transfer paths are to be exclusively within the site title boundary and should not require cleaners/tenants to exit title to perform operations. Transfer routes for waste collections are not to include stairs or **gradients greater than 1:14**.

### 1.3.1 Residential Waste Chute Rooms (Per Level)

Dual chutes will be provided for the disposal of waste generated from each residential tower. There is to be one chute dedicated to garbage and another dedicated to commingled recycling. The chute doors will be signed as garbage or commingled recycling as appropriate. Each chute will output directly into the stream appropriate end of chute equipment within the waste room.

Rubber skirting is to be provided at the end of the chutes to ensure debris from chute will not create a risk to operators.

Each waste room (per level) will have power, water communication connectivity for ease of maintenance and in compliance with standards.

### 1.3.2 End of Chute Room (Ground Floor)

The end of the chute room will manage the residential waste incoming from the upper levels. The building will have one end of chute room, with each chute stream to output directly into a **660L bin**. Rubber skirting is to be provided at the end of the chutes to ensure debris from chute will not create a risk to operators. End of chute room will be only accessible by building management staff, restricted to residents.

Glass and food waste from each apartment will be transferred residents on a as required basis.

## 1.4 Residential Waste Management Equipment

**Table 7** details the storage method, size, capacity and frequency of collection required for the development.

**Table 7 – Residential Waste Equipment Capacity & Volume**

| Stream               | Storage Method | Size      | Qty | Collections per Week | Weekly Capacity (L) | Weekly Volume (L) |
|----------------------|----------------|-----------|-----|----------------------|---------------------|-------------------|
| General Waste        | Bin Based      | 660 Litre | 2   | 3                    | 3,960               | 3,225             |
| Commingled Recycling | Bin Based      | 660 Litre | 2   | 3                    | 3,960               | 3,010             |
| Food Organics        | Bin Based      | 240 Litre | 3   | 2                    | 1,440               | 1,075             |
| Glass                | Bin Based      | 240 Litre | 3   | 2                    | 1,440               | 1,290             |

Due to the requirement for a suitable volume of each extended waste stream to be generated prior to collection, all extended streams will be collected on an as-required basis by a private collection contractor once the storage area capacity is reached. Further detailed on the storage methodology is provided in **Section 1.1.2**.

## 1.5 Residential Waste Storage and Location

**Table 8** demonstrates the cumulative area requirements (excluding circulation) in comparison to the designed provision of ground level waste storage to demonstrate the adequacy of the area provided.

**Table 8 – Waste Storage Area Requirements**

| Waste Area                          | Waste Equipment                 | Area Required (m <sup>2</sup> ) | Area Provided (m <sup>2</sup> ) |
|-------------------------------------|---------------------------------|---------------------------------|---------------------------------|
| Residential Waste Room              | 4no. 660L Bins                  | 3.92                            | 29.00                           |
|                                     | 6no. 240L Bins                  | 2.52                            |                                 |
|                                     | 2 sqm Hard Waste & E-waste      | 2.00                            |                                 |
|                                     | 2 sqm Wash Area                 | 2.00                            |                                 |
| End of Chute Residential Waste Room | 2no. 660L Bins at End of Chutes | 1.96                            | 6.00                            |
| <b>TOTAL</b>                        |                                 | 12.40m <sup>2</sup>             | 35.00m <sup>2</sup>             |

**ADVERTISED  
PLAN**

**This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright**

## 1.6 Residential Waste collection Methodology

All residential waste will be collected as outlined below.

**Table 9 – Residential – Waste Collection Summary**

| Use         | Stream               | Item                            | Collections per Week | Collection         |
|-------------|----------------------|---------------------------------|----------------------|--------------------|
| Residential | Garbage              | 2x 660 Litre Bins               | 3                    | Private Collection |
|             | Commingled Recycling | 2x 660 Litre Bins               | 3                    |                    |
|             | Organics             | 3x 240 Litre Bins               | 2                    |                    |
|             | Glass                | 3x 240 Litre Bins               | 2                    |                    |
|             | Hard Waste & E-waste | 2m <sup>2</sup> Hard Waste Area | As Required          |                    |

Residential waste collections will occur directly from the rear laneway adjacent to the *residential waste room at ground floor*. A **6.4m Low Height Clearance (2.1m)** or smaller collection vehicle will be utilised to perform all collections, entering and exiting the *allocated loading area in the rear laneway*, accessed via *Horne Street*. A minimum height clearance of **2.5m at the point of collection and 2.1m throughout vehicle path of travel** has been allowed for within the loading area and associated access. Swept path analysis showing sufficient access is provided in **Appendix B**.

Collection vehicles will prop within the *loading area*, with operators to collect the material directly from the waste room and return empty storage containers (if appropriate) immediately upon emptying.

# Waste Management Analysis

---

## COMMERCIAL

The following waste management strategy addresses the commercial components of the subject development.

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

## 2 Commercial Waste Management

This section covers the waste management strategy for the commercial component **only**, including waste stream separation, waste calculations and material handling proposed.

For operational efficiencies, independent waste systems have been allocated to the residential waste strategy and detailed in **Section 1**.

The commercial waste management strategy has been developed in alignment with expectations set by **Sustainability Victoria Better Practice Guide for Waste Management and Recycling in Multi-unit Developments (2019)**, better practice in Australia and similar development back of house operations. This Waste Management Plan makes allowance for extended waste streams and methodologies to enhance the ability to divert waste from landfill.

### 2.1 Commercial Waste Stream Systems

Waste shall be sorted on-site by tenants as appropriate into the following streams. **Extended Waste streams are not mandatory to be separated and subject to commercial tenants / building management.**

**Table 10 – Commercial Waste Streams**

| Core Waste Streams       | Extended Waste Streams         |
|--------------------------|--------------------------------|
| General Waste (Garbage)  | Cardboard and Waxed Cardboard  |
| Commingled Recycling     | Secure Paper                   |
| Food Organics            | Soft Plastics                  |
| Glass                    | Additional Waste Streams (e.g. |
| Hard Waste / Bulky Waste | Used Cooking Oil               |
| Electronic Waste         | Polystyrene                    |

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

#### 2.1.1 Core Waste Streams

Throughout the facility it will be ensured that it is as easy to dispose of all core waste streams as it is garbage. This will be achieved by ensuring the development is appropriately furnished with bin stations throughout the ancillary spaces and communal areas. Clear signage is to be appropriately displayed in combination with the bin stations to identify the segregation of waste streams and correct use of the bins.

Bin stations will be used to encourage the separation of waste streams and diversion from landfill. The bin stations incorporate the provision of multiple bins for different waste streams at central of the tenancy. This system is beneficial as users are required to make a conscious decision as to which bin they place their waste, typically resulting in a reduced volume of garbage (landfill).

The use of bin stations also reduces the amount of locations cleaners are required to service throughout the development.

Figure 3 – Bin Station Examples

# ADVERTISED PLAN

Commercial tenancies shall have minimum provisions for a single bin station per room or collective area for all uses.

## 2.1.1.1 General Waste and Commingled Recycling

Staff/cleaners will be responsible for transferring the waste in the bins stations throughout the tenancy, disposing general waste and commingled recycling into the corresponding 1100 and 660 litre bins respectively. Staff may utilise trolleys and or individual bins to facilitate the transfer.

Garbage waste is to be disposed of bagged and commingled recycling is to be disposed of loosely within the provided bins.

## 2.1.1.2 Food Organics and Glass

Organic waste extending from the commercial tenancies will be managed via 240L bins as required located within the commercial waste room on the ground floor (refer to **Appendix A**).

Retail tenancies may be furnished with small bins/tubs for the separation of temporary holding of food organics and glass, as deemed appropriate by the occupant(s). Tenants/staff will transfer and empty these bins/tubs into the larger 240L bins.

## 2.1.1.3 Hard Waste

A dedicated 2sqm hard waste area will be used by staff to temporarily store their hard waste until the time of collection. Hard waste will be collected on an as required basis.

Hard Waste collection will be coordinated with building management.

## 2.1.1.4 Electronic Waste

Staff/cleaners will be responsible for transferring and disposing electronic waste (including batteries, screens, computer parts) into a tub within the hard waste areas located in the waste room.

## 2.1.2 Extended Waste Streams

The following list of waste streams have not been individually included within the equipment provision but rather are a suggestion of streams that are typically found in commercial waste generation, and its separation will increase the diversion from landfill.

**Table 11 – Additional Waste Stream Methodology**

| Waste Stream               | Storage Method                                                                                                                                                                   |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Soft Plastic               | To be bagged using a gathering stand (refer figure below for example) or an 1100 litre bin subject to collection contractor preference                                           |
| Expanded Polystyrene (EPS) | To be stored within a gathering stand (refer figure below for example) or an 1100 litre bin subject to collection contractor preference                                          |
| Waxed Cardboard            | Dedicated line-marked storage area and/or 1,100 litre bin within waste store                                                                                                     |
| Unique Recyclables         | Generally stored within smaller bins appropriate to the stream within a dedicated area as nominated adjacent to the loading area. This includes fluorescent tubes, secure paper, |

**This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright**

Figure 4 – Example Soft Plastic Gathering Stand

**ADVERTISED  
PLAN**

## 2.2 Commercial Waste Generation

To provide a conservative waste volume estimate, a commercial waste generation rate has been adopted for each proposed use as outlined in **Table 12** using the following assumptions:

- Café/Restaurant is considered to operate as a Restaurant
- Retail is assumed to operate as food and beverage tenancy

These will provide for future change of use if undertaken.

**Table 12 – Commercial Tenancy Use**

| Proposed Use (As per Development Summary) | Adopted Commercial Waste Generation Rate | Area (m <sup>2</sup> ) | Assumed Operational Days per week |
|-------------------------------------------|------------------------------------------|------------------------|-----------------------------------|
| Café/Restaurant                           | Restaurant                               | 115.5                  | 6                                 |
| Retail                                    | Retail (Food & Drink)                    | 82.5                   | 6                                 |

Waste generation volumes per week are shown in **Table 13**.

**Table 13 – Commercial Waste Generations**

| Use          | Weekly Generation Rate (Litres / 100m <sup>2</sup> / Week) |           |          |       |
|--------------|------------------------------------------------------------|-----------|----------|-------|
|              | General Waste                                              | Recycling | Organics | Glass |
| Restaurant   | 3,168                                                      | 896       | 792      | 304   |
| Retail (F&B) | 1,440                                                      | 1,071     | 360      | 129   |

Weekly waste generation assessment for the commercial development component is shown in **Table 14**.

Common areas of the commercial facilities (i.e. back of house, storage, etc.) are not considered to generate additional waste. Waste generated by these ancillary areas is created in service of the tenancies and is therefore incorporated into the rates shown above.

**This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright**

Table 14 – Commercial Waste Generation Assessment

| Use                   | Area (Net Leasable) | Weekly Waste Volume (Litres / Week) |              |              |            |
|-----------------------|---------------------|-------------------------------------|--------------|--------------|------------|
|                       |                     | General Waste                       | Recycling    | Organics     | Glass      |
| Restaurant            | 115.5               | 3,659                               | 1,035        | 915          | 351        |
| Retail (Food & Drink) | 82.5                | 1,188                               | 884          | 297          | 106        |
| <b>TOTAL</b>          |                     | <b>4,847</b>                        | <b>1,919</b> | <b>1,212</b> | <b>457</b> |

## 2.3 Internal Waste Transfer and Handling

All waste transfer paths are to be exclusively within the site title boundary and should not require cleaners/tenants to exit title to perform operations. Transfer routes for waste collections are not to include **stairs or gradients greater than 1:14.**

## 2.4 Commercial Waste Management Equipment

**Table 15** detail the storage method, size, capacity and frequency of collection required for the development.

Table 15 – Commercial Waste Equipment Capacity & Volume

| Stream               | Storage Method | Size       | Qty | Collections per Week | Weekly Capacity (L) | Weekly Volume (L) |
|----------------------|----------------|------------|-----|----------------------|---------------------|-------------------|
| General Waste        | Bin Based      | 1100 Litre | 4   | 2                    | 8,800               | 4,847             |
| Commingled Recycling | Bin Based      | 660 Litre  | 2   | 2                    | 2,640               | 1,919             |
| Food Organics        | Bin Based      | 240 Litre  | 3   | 2                    | 1,440               | 1,212             |
| Glass                | Bin Based      | 240 Litre  | 2   | 1                    | 480                 | 457               |

Due to the requirement for a suitable volume of each extended waste stream (refer to **Section 2.1.2**) to be generated prior to collection, all extended streams will be collected on an as-required basis by a private collection contractor once the storage area capacity is reached.

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

**ADVERTISED  
PLAN**

# ADVERTISED PLAN

## 2.5 Commercial Waste Storage and Location

**Table 16** demonstrates the cumulative area requirements (excluding circulation) in comparison to the designed provision of waste storage to demonstrate the adequacy of the area provided.

**Table 16 – Commercial Waste Storage Area Requirements**

| Waste Room       | Waste Equipment  | Area Required (m <sup>2</sup> ) | Area Provided (m <sup>2</sup> ) |
|------------------|------------------|---------------------------------|---------------------------------|
| Commercial Waste | 4no. 1100L Bins  | 5.32                            | 31.00                           |
|                  | 2no. 660L Bins   | 1.96                            |                                 |
|                  | 6no. 240L Bins   | 2.52                            |                                 |
|                  | 2 sqm Hard Waste | 2.00                            |                                 |
|                  | 2 sqm Wash Area  | 2.00                            |                                 |
| TOTAL            |                  | 13.80m <sup>2</sup>             | 31.00m <sup>2</sup>             |

## 2.6 Commercial Waste collection Methodology

All commercial waste will be collected via private contractor.

**Table 17 – Overall Site – Waste Collection Summary**

| Use        | Stream                                 | Item                | Collections per Week |
|------------|----------------------------------------|---------------------|----------------------|
| Commercial | Garbage                                | 4x 1100 Litre Bins  | 2                    |
|            | Commingled Recycling                   | 2x 660 Litre Bins   | 2                    |
|            | Food Organics                          | 3x 240 Litre Bins   | 2                    |
|            | Glass                                  | 2x 240 Litre Bins   | 1                    |
|            | Hard Waste & Additional Waste Streams* | 2m2 Hard Waste Area | As Required*         |

\* Additional waste streams (i.e. e-waste or soft plastic) will be collected on an as required basis due to the requirement to accumulate a sufficient volume of material prior to collection. Anticipated collection of approx. 1 per month per stream.

Commercial waste collections will occur directly from the rear laneway adjacent to the *commercial waste room at ground floor*. A **6.4m Low Height Clearance (2.1m)** or smaller collection vehicle will be utilised to perform all collections, entering and exiting the *allocated loading area in the rear laneway*, accessed via *Horne Street*. A minimum height clearance of **2.5m at the point of collection and 2.1m throughout vehicle path of travel** has been allowed for within the loading area and associated access. Swept path analysis showing sufficient access is provided in *Appendix B*.

Collection vehicles will prop within the *loading area*, with operators to collect the material directly from the waste room and return empty storage containers (if appropriate) immediately upon emptying.

No bins will be stored outside of the title boundary or presented to kerb for collection at any time.

*Building/Dock Management* will ensure sufficient access is provided for collection vehicle operators during collection times.

## ADVERTISED PLAN

# 3

# Standards, Compliance and Equipment

---

Following sections details on best practice waste management methodology, standards required for waste rooms and equipment details.

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

# 3 Standards and Compliance

## 3.1 Bin Supplier and Colours

All bins and equipment mentioned in this WMP will be provided by private supplier. The below bin colours are specified by **Australian Standard AS4123.7 2006**, however due to the private nature of the collection, these are only recommendations and are not mandatory:

- Garbage (general waste) bins shall have red lids with dark green or black body.
- Recycle bins shall have yellow lids with dark green or black body.
- Cardboard bins shall have blue lids with blue body.
- Glass bins shall have purple lids with dark green or black body.
- Organics bins shall have lime green lids with dark green or black body.

Private collection contractors often supply their own bins for collection.

## 3.2 Signage

Waste drop-off areas and bins will be clearly marked and signed with the approved Sustainability Victoria waste disposal signage, or equivalent, examples of which are provided in **Figure 5**. Staff / cleaners will be instructed by building management to adhere to these requirements.

Figure 5 – Example of Sustainability Victoria Signage

**ADVERTISED  
PLAN**

### 3.3 Ventilation

Ventilation for waste room areas is provided in accordance with Australian Standard AS1668.

### 3.4 Bin Washing

An appropriately drained wash down area will be provided within each of the waste areas for each component of the development, in which each bin is to be regularly washed by building management (or equivalent). Bin washing area or bin wash bays must discharge to a grease trap.

Alternatively, a third-party bin washing service may be engaged to perform regular washing of bins. Bin washing suppliers must retain all waste water to within their washing apparatus and not impact on the drainage provisions of the site.

### 3.5 Noise Reduction

All waste areas shall meet BCA and AS2107 acoustic requirements as appropriate with operational hours and collection times assigned to minimise acoustic impact on surrounding premises.

### 3.6 Vermin Prevention

All waste areas are enclosed and kept clean for prevention of vermin ingress. Regular washing of areas and bins will occur. Waste Equipment Details

### 3.7 Typical Equipment Dimensions

The below table details the typical waste equipment dimensions.

**Table 18 – Typical Storage Unit Dimensions**

| Unit           | Width (mm) | Depth (mm) | Height (mm) |
|----------------|------------|------------|-------------|
| 1100 Litre Bin | 1,240      | 1,070      | 1,330       |
| 660 Litre Bin  | 1,260      | 780        | 1,330       |
| 240L Bin       | 585        | 730        | 1060        |

**This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright**

**ADVERTISED  
PLAN**

## 3.8 High Level Purchasing Schedule

**Table 19** list the equipment supply required for the core waste streams as per the conditions proposed within this report.

All service requirements noted are indicative only and must be confirmed with the supplier prior to commencement of construction.

**Table 19 – Equipment Supply Schedule**

| Item        | Quantity                     | Typical Services Requirement (s)*                                                                                                     | Supplier                                    |
|-------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| Dual Chutes | 1 x Garbage<br>1 x Recycling | <u>Power Supply</u> : 1-Phase<br>20Amp<br><u>Water Requirements</u> : Cold<br>Water for Sprinklers<br>BMS or Internet<br>Connectivity | Private Supplier<br>(Wastech or equivalent) |
| 1100L Bin   | 4 x Garbage                  | Nil                                                                                                                                   | Private Supplier<br>(SULO or equivalent)    |
| 660L Bin    | 3x Garbage<br>5 x Recycling  | Nil                                                                                                                                   | Private Supplier<br>(SULO or equivalent)    |
| 240L Bin    | 6 x Organics<br>5 x Glass    | Nil                                                                                                                                   | Private Supplier<br>(SULO or equivalent)    |

## 3.9 Supplier Contact information

A complimentary listing of contractors and equipment suppliers is provided in **Table 20** below for your reference. Urbis is not associated with these suppliers, and there is no obligation to procure goods or services from these companies. This is not intended to be a complete list of available suppliers. Urbis does not warrant or make representations regarding the goods or services provided by these suppliers.

**Table 20 – Supplier Contact List**

| Service Type                | Contractor/Supplier Name                      | Phone          | Website                                                                                |

COLOUR LEGEND

- Apartment - 2 BED
- Apartment - 3 BED
- Communal Facilities
- Retail / Commercial
- Cafe / Restaurant
- Services
- Planting / Landscaped Area
- Balcony / Terrace Area

GENERAL NOTES

- All apartments to have a minimum energy rating of 7 stars NatHERS
- Overall development to have an average energy rating of 6 stars NatHERS minimum
- All apartments to have hot water supplied through an electric instantaneous hot water system
- Water saving to be achieved through the use of efficient Fictures & Fittings and Rainwater harvesting system.
- Windows to have high performance glazing as required to meet energy requirements
- High quality indoor environment to be achieved through the use of better materials, more natural light and the provision of fresh air to occupants.
- Adequate daylight for occupant health and energy efficiency provided in accordance with design guidelines

PARKING NOTES

The basement design, including all levels, ramp grades, transitions, headroom clearances, and dimensions of car parks to be in accordance to AS/NZ 2980.1-2004, and to the satisfaction of the responsible authority. Refer to traffic report prepared by Urbis.

- All mechanical venting of basement required to occur internally within site
- Car spaces to be typically 2850 x 4900 unless otherwise specified
- Columns to be located within a distance of 250 to 1250mm from aisle end of parking space unless specified otherwise
- 'Ned Kelly' staggered height wall mounted bike storage (or similar) @ 500mm centres
- CO2 sensors will be installed throughout the two basement carparking areas and connected to mechanical exhaust equipment to lower operational time while maintaining good air quality

PARKING ALLOCATION

On-site parking allocation to include

- Not less than one car space for each two bedroom apartment
- Not less than two car spaces for each three or more bedroom apartment
- Not less than one car spaces per 100sqm of leasable floor area for Retail / Commercial tenancies

LANDSCAPE NOTE

Landscaping shown is INDICATIVE ONLY. Exact number and location of planting and planter pots to be in accordance with Landscape plan prepared by Urbis, Landscape architecture.
