Patch 2

AS 4970—2009

Tree Protection Zone

All existing native trees on the subject site where the TPZ has potential to be encroached upon during the development stage will be protected in accordance with the standards set out within AS 4970-2009.

The adjacent image illustrates how this would be achieved.

LEGEND:

- 1 Chain wire mesh panels with shade cloth (if required) attached, held in place with concrete feet.
- 2 Alternative plywood or wooden paling fence panels. This fencing material also prevents building materials or soil entering the TPZ.
- 3 Mulch installation across surface of TPZ (at the discretion of the project arborist). No excavation, construction activity, grade changes, surface treatment or storage of materials of any kind is permitted within the TPZ.
- 4 Bracing is permissible within the TPZ. Installation of supports should avoid damaging roots.
