

# Native vegetation removal report

## A report to support an application to remove, destroy or lop native vegetation in the Intermediate Assessment Pathway using the modelled condition score

This report provides information to support an application to remove native vegetation in accordance with the *Guidelines for the removal, destruction or lopping of native vegetation*. The report is not an assessment by DELWP or local council of the proposed native vegetation removal. Biodiversity information and offset requirements have been calculated using modelled condition scores contained in the *Native vegetation condition map*.

**Date and time:** 24 October 2021 19:20 PM

**Lat./Long.:** -38.4848219077294, 145.238836234821

**Native vegetation report ID:**

**Address:** 380 BACK BEACH ROAD COWES 3922

304-20211024-005

GAP ROAD COWES 3922

Address unknown

## Assessment pathway

### The assessment pathway and reason for the assessment pathway

Assessment pathway	Intermediate Assessment Pathway
Extent of past plus proposed native vegetation removal	0.020 hectares
No. large trees	0 large tree(s)
Location category	Location 2  The native vegetation is in an area mapped as an Directory of Important Wetlands of Australia and Endangered Ecological Vegetation Class. Removal of less than 0.5 hectares of native vegetation will not have a significant impact on any habitat for a rare or threatened species.

## Offset requirement

### The offset requirement that will apply if the native vegetation is approved to be removed

Offset type	General offset
Offset amount	0.017 general habitat units
Offset attributes	
Vicinity	Port Phillip And Westernport Catchment Management Authority (CMA) or Bass Coast Shire Council
Minimum strategic biodiversity value score	0.744
Large trees	0 large tree(s)

**ADVERTISED  
PLAN**

Native vegetation removal report – report ID 304-20211024-005

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

## Biodiversity information about the native vegetation

### Description of any past native vegetation removal

Any native vegetation that was approved to be removed, or was removed without the required approvals, on the same property or on contiguous land in the same ownership, in the five year period before the application to remove native vegetation is lodged is detailed below.

Permit/PIN number	Extent of native vegetation (hectares)
None entered	0 hectares

### Description of the native vegetation proposed to be removed

Extent of all mapped native vegetation	0.020 hectares
Condition score of all mapped native vegetation	0.568
Strategic biodiversity value score of all mapped native vegetation	0.930
Extent of patches native vegetation	0.020 hectares
1	0.011 hectares
2	0.004 hectares
3	0.005 hectares
Extent of scattered trees	0 hectares
No. large trees within patches	0 large tree(s)
No. large scattered trees	0 large tree(s)
No. small scattered trees	0 small tree(s)

### Additional information about trees to be removed, shown in Figure 1

Tree ID	Tree circumference (cm)	Benchmark circumference (cm)	Scattered / Patch	Tree size
N/A				

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

ADVERTISED  
PLAN

## Other information

Applications to remove, destroy or lop native vegetation must include all the below information. If an appropriate response has not been provided the application is not complete.

### Photographs of the native vegetation to be removed

Recent, dated photographs of the native vegetation to be removed must be provided with the application. All photographs must be clear, show whether the vegetation is a patch of native vegetation or scattered trees, and identify any large trees. If the area of native vegetation to be removed is large, provide photos that are indicative of the native vegetation.

Ensure photographs are attached to the application. If appropriate photographs have not been provided the application is not complete.

### Topographical and land information

Description of the topographic and land information relating to the native vegetation to be removed, including any ridges, crests and hilltops, wetlands and waterways, slopes of more than 20 percent, drainage lines, low lying areas, saline discharge areas, and areas of existing erosion, as appropriate. This may be represented in a map or plan. **This is an application requirement and your application will be incomplete without it.**

Generally flat roadside reserve with an open drain and shared user path running parallel to road. Sediment control measures will be established prior to works commencing.

### Avoid and minimise statement

This statement describes what has been done to avoid the removal of, and minimise impacts on the biodiversity and other values of native vegetation. **This is an application requirement and your application will be incomplete without it.**

Site positioned adjacent to a decommissioned pump station and associated crossover, area is more disturbed than other roadside vegetation in vicinity. A site selection process has been undertaken previously with other sites being disregarded due to higher impacts to native vegetation. Planned removal around new infrastructure (patch 3) minimised during design change.

As this EVC (Swamp Scrub; EVC 53; Gippsland Plain Bioregion) is characterised by a generally thick, connected undlow canopy cover and, as such, is typically considered in terms of patch removal. Assumed loss of individual trees has been accounted for in two ways:

1. Through the inclusion of areas where height reduction pruning (rather than removal) will be undertaken (Patch 3). As it is likely that some trees will require pruning >1/3 of the canopy these areas have been included under assumed loss.

2. The patch sizes have been drawn with generous dimensions in order to account for any assumed loss of understorey shrubs growing at the edge of the disturbance envelope.

Furthermore, the clearing of patches 1 & 2 constitute an expansion of the existing site access area rather than novel removal. This was part of the minimisation efforts made during the project design phase.

Native vegetation loss will be restricted to areas of the linear strip of roadside vegetation. The adjacent paddock is devoid of native vegetation and contains no scattered trees within the vicinity of the proposed works.

### Defendable space statement

Where the removal of native vegetation is to create defendable space, a written statement explaining why the removal of native vegetation is necessary. This statement must have regard to other available bushfire risk mitigation measures. This statement is not required if your application also includes an application under the Bushfire Management Overlay.

Not applicable

### Offset statement

An offset statement that demonstrates that an offset is available and describes how the required offset will be secured. **This is an application requirement and your application will be incomplete without it.**

Offsets in this area are available from offset brokers and will be purchased. Quotation attached.

**ADVERTISED  
PLAN**

## Next steps

Applications to remove, destroy or lop native vegetation must address all the application requirements specified in *Guidelines for the removal, destruction or lopping of native vegetation*. If you wish to remove the mapped native vegetation you are required to apply for a permit from your local council. This *Native vegetation removal report* must be submitted with your application and meets most of the application requirements. The following needs to be added as applicable.

### Property Vegetation Plan

Landowners can manage native vegetation on their property in the longer term by developing a Property Vegetation Plan (PVP) and entering into an agreement with DELWP.

If an approved PVP applies to the land, ensure the PVP is attached to the application.

### Applications under Clause 52.16

An application to remove, destroy or lop native vegetation is under Clause 52.16 if a Native Vegetation Precinct Plan (NVPP) applies to the land, and the proposed native vegetation removal is not in accordance with the relevant NVPP. If this is the case, a statement that explains how the proposal responds to the NVPP considerations must be provided.

If the application is under Clause 52.16, ensure a statement that explains how the proposal responds to the NVPP considerations is attached to the application.

## Appendix 1 - Details of offset requirements

### Native vegetation to be removed

Extent of all mapped native vegetation (for calculating habitat hectares)	0.020	The area of land covered by a patch of native vegetation and/or a scattered tree, measured in hectares. Where the mapped native vegetation includes scattered trees, each tree is assigned a standard extent and converted to hectares. A small scattered tree is assigned a standard extent defined by a circle with a 10 metre radius and a large scattered tree a circle with a 15 metre radius.  The extent of all mapped native vegetation is an input to calculating the habitat hectares.
Condition score*	0.568	The condition score of native vegetation is a site-based measure that describes how close native vegetation is to its mature natural state. The condition score is the weighted average condition score of the mapped native vegetation calculated using the <i>Native vegetation condition map</i> .
Habitat hectares	0.011	Habitat hectares is a site-based measure that combines extent and condition of native vegetation. It is calculated by multiplying the extent of native vegetation by the condition score:  <b>Habitat hectares = extent x condition score</b>
Strategic biodiversity value score	0.930	The strategic biodiversity value score represents the complementary contribution to Victoria's biodiversity of a location, relative to other locations across the state. This score is the weighted average strategic biodiversity value score of the mapped native vegetation calculated using the <i>Strategic biodiversity value map</i> .
General landscape factor	0.965	The general landscape factor is an adjusted strategic biodiversity value score. It has been adjusted to reduce the influence of landscape scale information on the general habitat score.
General habitat score	0.011	The general habitat score combines site-based and landscape scale information to obtain an overall measure of the biodiversity value of the native vegetation. The general habitat score is calculated as follows:  <b>General habitat score = habitat hectares x general landscape factor</b>

\* **Offset requirements for partial removal:** If your proposal is to remove parts of the native vegetation in a patch (for example only understorey plants) the condition score must be adjusted. This will require manual editing of the condition score and an update to the calculations that the native vegetation removal tool has provided: habitat hectares, general habitat score and offset amount.

### Offset requirements

Offset type	General offset	A general offset is required when the removal of native vegetation does not have a significant impact on any habitat for rare or threatened species. All proposals in the Basic and Intermediate assessment pathways will only require a general offset.
Offset multiplier	1.5	This multiplier is used to address the risk that the predicted outcomes for gain will not be achieved, and therefore will not adequately compensate the biodiversity loss from the removal of native vegetation.
Offset amount (general habitat units)	0.017	The general habitat units are the amount of offset that must be secured if the application is approved. This offset requirement will be a condition to any permit or approval for the removal of native vegetation.  <b>General habitat units required = general habitat score x 1.5</b>
Minimum strategic biodiversity value score	0.744	The offset site must have a strategic biodiversity value score of at least 80 per cent of the strategic biodiversity value score of the native vegetation to be removed. This is to ensure offsets are located in areas with a strategic biodiversity value that is comparable to the native vegetation to be removed.
Vicinity	Port Phillip And Westernport CMA or Bass Coast Shire Council	The offset site must be located within the same Catchment Management Authority boundary or municipal district as the native vegetation to be removed.
Large trees	0 large tree (s)	The offset site must protect at least one large tree for every large tree removed. A large tree is a native canopy tree with a Diameter at Breast Height greater than or equal to the large tree benchmark for the local Ecological Vegetation Class. A large tree can be either a large scattered tree or a large patch tree.
